## Professional Summary

Senior .NET Developer with 9+ years of professional experience designing, building, and maintaining web applications, SaaS Platform, Enterprises Solution and APIs using C# and the .NET ecosystem. Proven track record delivering scalable services and improving system performance through clean architecture, automated testing, and CI/CD practices. Strong experience with ASP.NET Core, Entity Framework Core, SQL Server, and Azure cloud services.

## Skills

**Languages:** C#, SQL, TypeScript, JavaScript.

**Frameworks / Libraries:** .NET 6/7/9, ASP.NET Core, ASP.NET MVC, Entity Framework Core.

**Web / Front-end:** RESTful APIs, Web API, Razor, React (Advanced), HTML5, CSS3.

**Databases:** Microsoft SQL Server.

**Architecture:** Microservices, Clean Architecture, CQRS .

**Practices:** CI/CD, automated deployments, code reviews

## Experience

### Senior .NET Developer | ASP.NET Core | React| REST APIs |

**LAM Sol Islamabad | Dec 2025 – Till Now**

- Developed and maintained core customer-facing microservices using .NET 9, ASP.NET Core Web API, and EF Core, supporting ~120k monthly active users.
- Led migration of a monolithic billing module to three microservices (billing, invoicing, payment) deployed in Azure AKS, resulting in 45% reduction in release cycle time and 30% improvement in system availability during billing peaks.
- Increased automated unit and integration test coverage from 38% to 72%, reducing production bugs by 35% year-over-year.
- Mentored 2 junior developers, conducted code reviews, and introduced linting and static analysis to improve code quality metrics

### Senior .NET Developer

**Nexis Software Solutions, Islamabad | Jan 2021 – Nov 2025**

- Architected and engineered distributed, high-throughput microservices using **.NET Core / .NET 9** and **React**, optimizing database operations via Entity Framework Core and SQL Server for enterprise systems.
- Orchestrated and managed containerized multi-cluster environments using **Rancher (Kubernetes)**, implementing automated node scaling, service discovery, and secure configuration management.

- Designed and executed a full database and schema migration strategy across isolated relational microservices using automated EF Core migrations, achieving seamless data synchronization.
- Conducted regular code quality audits, designed structured practice training modules for onboarding team members, and standardizing clean architecture patterns across the development team.

## Full Stack .NET & React Developer | High-Performance APIs

**The Next Bridge | March 2017 – Dec 2020**

- Built RESTful APIs and internal tools using ASP.NET Core and SQL Server to support B2B integrations for retail clients, handling peak loads of up to 3,000 requests/min.
- Designed and implemented a bulk data processing pipeline using Azure Functions and processing over 5M records/month with retry and dead-letter patterns; reduced manual processing time by 90%.
- Developed and enhanced front-end features using React and Razor, collaborating closely with UI/UX teams to deliver scalable admin portal solutions, improving customer onboarding throughput by 22%.
- Built reusable React components, managed application state, and integrated APIs efficiently to ensure smooth user experience and performance optimization.
- Diagnosed and resolved performance bottlenecks in legacy SQL stored procedures, improving nightly ETL window by 65%.

---

## Selected Projects:

### Enterprise Resource Planning (ERP) & POS Ecosystem

#### **Short Description**

A high-performance, full-stack distributed ERP and POS system engineered with a **Microservices Architecture** to optimize multi-warehouse supply chains, retail sales checkout workflows, and automated general ledger financial tracking.

#### **Module Breakdown Summary**

- **Identity & Security (RBAC):** Fine-grained, role-based control protecting client-side navigation screens and backend routes with explicit operational tokens.
- **Inventory Control:** Centralized dynamic catalog handling items, sub-categories, suppliers, purchase workflows, and a real-time inventory movement ledger.
- **Sales & POS Terminal:** High-speed transactional checkout grid tracking open/closed cashier sessions, dynamic discounts, automatic VAT computations, and active gift cards.
- **Double-Entry Accounting:** A structural ledger system built on a formal Chart of Accounts that validates strict balanced constraint checks ( $\text{\$Debits} = \text{\$Credits}$ ) via asynchronous integration webhooks.

- **BI Analytical Reporting:** Instant data visualization grids processing sales patterns, fast-moving items, and individual register summaries.

## Stack

- **Backend:** .NET Core Web API, EF Core, SQL Server (SSMS).
- **Frontend:** React (Vite), TypeScript, TanStack Query & Table, Tailwind CSS, Zustand.

## Hospital Management System

**Clinical/hospital system for patient lifecycle management, doctor scheduling, lab diagnostics, and OPD consultation workflows.**

- Built patient onboarding/admission, appointment booking, lab reporting, and OPD consultation features.
  - **Stack:** ASP.NET Core Web API, EF Core, SQL Server | React (Vite), TypeScript, TanStack Query, Tailwind CSS
- 

## Attendance Management System

**Full-stack HR platform for employee records, attendance, leave, payroll inputs, and internal HR workflows on a single web stack.**

- Delivered modules for employee onboarding/profiles, department & designation setup, shift/attendance tracking, leave request & approval, and HR reporting dashboards.
- Built role-based access so HR, managers, and employees see only the screens and actions allowed for their role.
- **Stack:** ASP.NET Core Web API, EF Core, SQL Server | React (Vite), TypeScript, TanStack Query, Tailwind CSS

## Key Responsibilities & Achievements

- ✓ Designed, developed, and maintained **full-stack applications** using **ASP.NET Core, React.js, WinForms, and SQL Server** across desktop and web platforms
- ✓ Developed and maintained **RESTful APIs** to support scalable and high-performance frontend and backend communication
- ✓ Applied **Clean Architecture principles and Microservices** to ensure separation of concerns, maintainability, and scalable code structure
- ✓ Contributed to the design and implementation of **Microservices-based architecture**, improving system scalability and modularity
- ✓ Built reusable and responsive UI components using **React.js**, improving user experience and development efficiency
- ✓ Developed enterprise-level **desktop applications using WinForms**, enhancing business process automation
- ✓ Designed and optimized **SQL Server databases**, including stored procedures, indexing, and query performance tuning
- ✓ Integrated frontend and backend systems to ensure seamless data flow and real-time functionality
- ✓ Participated in requirement analysis, system design, and solution architecture discussions with stakeholders
- ✓ Improved application performance through debugging, profiling, and optimization techniques
- ✓ Delivered multiple production-ready systems across **education, enterprise, and business domains**

---

## **Education**

**Bachelor in Computer Science Gomal University, D.I. Khan** *Sept 2012 – May 2015*

**Master. in Computer Science Gomal University, D.I. Khan** *Sept 2015 – Dec 2017*
